DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 29-35 rejected under 35 U.S.C. 103(a) as being unpatentable over Fujikawa (6,414,738) in view of Ohori et al. (2001/0052954).

Regarding Claims 29-35, Fujikawa discloses a semiconductor display device where in Figs. 1, 3, 4 and 5, it is disclosed a flat panel display comprising a plurality of sub-pixels driven by thin film transistors 30, each of the thin film transistors including a source electrode 8 and drain electrode 9 gate electrode 7 and a polysilicon semiconductor layer 2 and each of the sub-pixels including a first electrode, a second electrode and a light emitting layer disposed between the first electrode and the second electrode wherein one of the source and drain electrode includes a first titanium layer 13, a titanium nitride layer 14, and aluminum layer 9 and a titanium nitride layer 15. Fujikawa, fails to disclose the required titanium layer on top of the titanium nitride layer. However, Ohori et al. disclose a liquid crystal display device where in paragraphs 52-54, titanium layer is located on top between the source electrode and transparent display electrode.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required titanium layer as the top layer between the

source electrode and a transparent display electrode in Fujikawa as taught by Ohori et al. in order to have a better electrical connection.

Regarding Claim 29, Fig. 7 of Fujikawa discloses the required nitrogen concentration.

Regarding Claims 30-33, column 8 of Fujikawa discloses the required film/layer thicknesses.

Regarding Claim 34 and 34, column 8 lines 15-40 of Fujikawa discloses the required concentration values.
